

MetriMist™ is an environmentally friendly way to upgrade your healthcare facility's overall perception and experience.

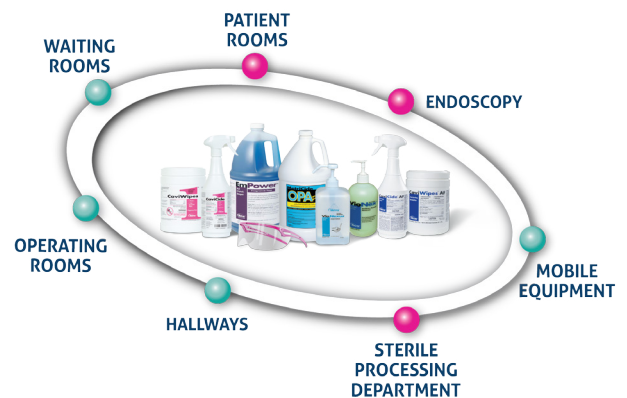

One of our most powerful senses – the sense of smell – can affect the overall experience of both your staff and patients. By eliminating unpleasant odors you can create a more positive work environment for your staff, and increase the perception of the patient experience.

MetriMist™ contains natural aromatic deodorizers. It is an environmentally friendly alternative to aerosol air fresheners and eliminates odors by cleaning the air, not masking the smell.

Features:

- Biodegradable and non-toxic
- Non-flammable
- Cost effective
